Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

Claim 8; SEQ ID NO 17352; 2537pp + Sequence Listing; English

The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

```
sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises at least is nucleotides and the combination of the 5'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13633 to AAH13642 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

The invention relates to identifying (MI) a candidate p51 pathway in modulating agent, by contacting an assay system comprising a purified HW modulating agent, by contacting an assay system comprising a purified HW polypeptide (human orthologue of genes that modify the p53 pathway in Drosophila) or nucleic acid with a test agent under conditions, where but correctly and detecting a test agent-biased activity of the assay system. Also included are modulating (M2) a p53 pathway of a cell (comprising or contacting a cell defective in p53 pathway of a cell (comprising or that specifically binds to a HM polypeptide comprising an HM amino acid sequence, where p53 function is restorately, modulating and mammalian cell (Comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising the sample with a probe for HM corresponding to a patient (comprising the sample with a probe for HM expression, (c) comparing the results with a control; and (d) determining whether the comparison indicates a likelihood disease). (M1) is useful correctly in a patient, where the cancer has greater than 25 * expression cancer, and patient cancer has greater than 25 * expression lead to the p53 pathway. Such as, angiogenesis is related therapeutic applications, where disease or disorder prognosis is related therapeutic applications, where disease or disorder prognosis is related therapeutic applications, where disease or disorder prognosis is related therapeutic applications, where disease or disorder prognosis is related therapeutic and profile and the cell, so that the cell undergoes normal control feration of the cell, so that the cell undergoes normal control feration of the cell, so that the cell cycle (M2) and (M3) are useful for treating defects in the p53 pathway such as angiogenic, contacting the present sequence contacting the cell in the p53 pathway such as angiogenic, contacting the cell in the cell cycle also the cell for modulating def
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

Human p53 modifying protein, SEQ ID 150.

13-AUG-2003 (first entry)

ABO07190 standard; protein; 514 AA

RESULT

```
The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase pathway. Also described: (1) predicting whether a compound is capable of modulating the activity of cells, comprising obtaining a sample of cells, determining whether the cells express a plurality of markers, and correlating the expression of the markers to the compound's ability to modulate the activity of the cells; (2) a plurality of cell lines for identifying polynucleotides and polypeptides whose expression levels

correlate with compound sensitivity or resistance of cells associated with a disease state; and (3) identifying polymuclectides and polypeptides that predict compound sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds, analysing the expression pattern of a microarray of polymuclectides or polypeptides, and selecting polymuclectides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of the microarray. The polymuclectides and polypeptides have cytostatic activities, and can be used in gene therapy. The polymuclectides and polypeptides are useful in predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways. These may be used in determining drug sensitivity in patients to allow the development of individualized cancer; based on patient aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present cancer invention.

The invention relates to 2175 novel human ovarian antigens (ABB41054-ABB43228) and to cDNAs encoding them (ABG54131-ABG56305), and also encompasses polypeptides 90% identical and polybrucleorides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen corrections and host cells comprising human ovarian antigen and the use of ovarian antigens, and the use of ovarian polymucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tunnours of ovarian or breast origin, reproductive system disorders (e.g., infertinity, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxinc shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired chockers) inflammatory conditions (e.g., mastitis, oophoritis and inflammatory disorders (e.g., anaemia), cardiovascular disorders and urinary system disorders, neurological disorders, gastrointestinal disorders and urinary system disorders, ovarian antigen polypeptides and of polymucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may also be used in forensic analysis, and the collection of individuals and in forensic analysis, and the collection of individuals and in forensic analysis, and the sequence data for this parent did netering and phenotyphing. The polymucle of sequence data for this parent did netering and them parent of the printed control of the invention. Note: The sequence data for this parent did netering antigen of the invention. Note: The sequence data for this parent did netering antigen polymore of the printed of sequence data for this parent did netering and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         at ftp.wipo.int/pub/published pct_sequences

The invention relates to an isolated human disease detection and treatment (MDDT) polypeptide (I) selected from a polypeptide having a treatment (MDDT) polypeptide (I) selected from a polypeptide having a treatment (MDDT) polypeptide (I) a beloted from the sequence selected from 254 sequences (BABP121.ABP1484) given in the specification, a naturally occurring polypeptide comprising a sequence (I) a beful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound that specifically binds (I) or modulates the activity of (I), and for preparing a polyclonal or monoclonal antibody by hypridoma technology.

CC preparing a polyclonal or monoclonal antibody by hypridoma technology.

Nucleic acids (II) (AB972449-AB9720) encoding (I) are useful for screening a compound for effectiveness in altering expression of a target of polymucleotides and antibody by hypridoma technology.

CC Screening a compound for effectiveness in altering expression of a test compound, in a diagnostic test for a condition or a disease associated with the expression of MDDT in a bample, for detecting (I) in a sample, or for detecting (I) in a sample, and for purifying (I) from a sample. A composition comprising (I), an associated with decreased or increased expression of functional MDDT. Or (II) are useful for diagnosing, treating or preventing disorders are selected from a cell proliferative disorder such as arteriosclerosis, or (II) are useful for diagnosing, treating or preventing disorders are selected from a cell proliferative disorder and an autoimmune/inflammatory disorder such as AIDS, Addison's disease, all automatory disorder such as AIDS, Addison's disease, and automatory disorder such as AIDS, Addison's disease or chemisted or transgenic animals to model human disease; in somatic or theumatoric arimals to medel human disease; in somatic or type, for detecting differences in the chromosomal location due to companiences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed ectivity of (II) or to treat disease states involving (II). (II) is useful for the rearrang antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                           301 KOOFPFHSAPALDVDWQSNNTFASCSTDMCIHVCKLGQDRPIKTFQGHTNEVNAIKWDPT 360

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS737-ABB2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human polynuclectides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to evytokine, cell proliferentiation or which may induce production of other cytchines in other cell populations. The production of other cytchines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytchine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                  Human, cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 20; SEQ ID NO 18277; 1399pp + Sequence Listing; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics, forensics of disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABGOO10-ABG30377 represent novel human diagnostic manno acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

Proteins of the invention and DNA sequences encoding them are given in records ABR22568—ABRES3003 and ACC66010-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the Buropean Patent Office. The complete document is available on CD-ROM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to 45 human intracellular signalling molecules (INTSIG), INTSIG-1 to INTSIG-45, and the cDNAs encoding them (ADA1319-ADA1408). The invention also encompasses expression constructs, host calls and transgenic organisms comprising an INTSIG nucleic acid sequence; the recombinant preparation of a INTSIG, an antibody against a INTSIG; methods of detection of INTSIG proteins or nucleic acids; am micro-array containing INTSIG nucleic acids; methods of screening compounds for their ability to modulate INTSIG acitvity or expression; and pharmaceutical compositions comprising an INTSIG protein, an INTSIG antibody, an INTSIG aponist or INTSIG antagonist. The INTSIG proteins, mucleic acids or compositions comprising them are useful in diagnosing, treating or compositions comprising them are useful in diagnosing, treating or preventing a variety of disorders, including cell proliferative disorders (e.g., AIDS, allergies, anaemia, asthma, Dronchitis, gout, multiple sclerosis, osteoarthritis, rheumatoid arthritis, or systemic lupus cervhemanosus; neurological disorders (e.g., epilepsy, stroke, alloredres disease); viral, bacterial, fungal, parasitic, protozoan or helminthic infections; neurological disorders (e.g., epilepsy, stroke, Alzheimer's disease); developmental disorders (e.g., achondroplastic disorders (e.g., disorders of the hypothalamus or pituitary gland or disorders (e.g., disorders of the hypothalamus or pituitary gland or disorders (e.g., cypletic fibrosis or hypercholesterolaemia). The present sequence represents an INTSIG protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NTANGEENGAHTIANNHIDMMEVDGDVEIPPNKAVVLRGHESEVFICAW-NPVSDLLASG 187

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1016-ABL10511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB7072). The sequence data for this parent aid not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          --EGGOD-----VPSNKDVTSLDW-----NSEGTLLATGSYDGFAR

```
signalling process in both Drosophila and Xenopus embryos. The Notchless protein has a novel highly conserved N-terminal domain followed by 9 WD40 repeats. Notchless, and nucleic acids enceding it, can be used in methods for the diagnosis and therapy of certain diseases, particularly cancer and neurodegenerative diseases (Claimed). A Notchless mutant in a sensitised Notch genetic background is used in a claimed method for identifying compounds capable of modifying the levels of expression or activity of a Notch protein

Notchless was identified in a screen for dominant modifiers of a Notch mutant phenotype in the Drosophila wing. The mutant dominantly suppressed the wing notching phenotype of notchind mutations, and the Notchless protein was shown to bind to the cytoplasmic domain of Notch. Notchless

                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in alucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL10511), expressed DNA sequences (ABL16176-ABL10511), expressed DNA ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The T2ap gene is involved in T cell activation, and in the modulation of immune responses. T2ap polynucleotides and polypeptides are useful for diagnosing or treating acute and chronic diseases involving T cell activation and Th1 and Th2 immune response, for the treatment of acute and chronic rejection of allotad and xeno organ transplants and bone marrow transplantation, for the treatment of rheumatoid arthritis, lupus erythematosis, multiple sclerosis, encephalitis, vasculitis, diabetes mellitus, pancreatitis, associated gastritis, for the treatment of malignant disorders of T, B or NK cells, for the treatment of malignant disorders of T, B or NK cells, for the treatment of malignant disorders of T, B or NK cells, for the treatment of skin tumours, adrenal tumours or lung tumours, wound healing, growth disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       250

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                John F. 15:2991-3004 (2001).

-! FUNCTION: Antagonizes telomeric silencing in yeast. May recruit sire nontelomeric sites or repression.

-!- SUBURT: Interacts with SIR4 amino-terminal domain. Interacts with a complex composed of SIN3 and RPD3. Identified in the Set3C complex with HOS2, HST1, SNT1, CPR1, HOS4/YIL112W and SET3.
-!- SUBCELIULAR LOCATION: Nuclear.
-!- SIMILARITY: Contains 1 Lish domain.
-!- SIMILARITY: Contains 7 WD repeats.
                                                                                                                                                                                                                                                                                                Mannhaupt G., Stucka R., Ehnle S., Vetter I., Feldmann H.;

Nuclochide sequences of Dictyostelium discoideum developmentally regulated cDNAs rich in (AAC) imply proteins that contain clusters casparagine, glutamine, or threonine.";
Mol. Gen. Genet. 218:453-459(1989)
-!- DEVELOPMENTAL STAGE: The concentration of AAC-rich mRNAs is low in dormant spores and growing cells, but increases during spore-germination and multicellular development.
-!- MISCELLANGUOUS: Several proteins derive from AAC-rich mRNA, which due to a frameshift also have ACA and CAA codons and thus are ASC. Thr. or Gln-rich.

"Complete genomic sequence of the filamentous nitrogen-fixing

cyanobacterium Anabaena sp. strain PCC 7120.";

DNA Res. 8:205-213(2001).

-: SIMILARITY: Contains 1 NB-ARC domain.

-: SIMILARITY: Contains 15 WD repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cyanobacteria; Nostocales; Nostocaceae; Nostoc.

"Nucleotide sequences of Dictyostelium discoideum developmentally
"Nucleotide sequences of Dictyostelium discoideum developmentally
asparagine, glutamine, or threonine.";
Mol. Gen. Genet. 218:453-459 (1989)
-!- DEVELOPMENTAL STAGE: The concentration of AAC-rich mRNAs is low
in dormant spores and growing cells, but increases during
spore-germination and multicellular development.
-!- MISCELLANEGUS: Several proteins derive from AAC-rich mRNA, which,
due to a frameshift also have ACA and CAA codons and thus are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Dictyostelium discoideum (Slime mold).
